

Europlanters

Street Furniture

With over 30 years experience, Europlanters manufacture and supply the highest quality street furniture and have designed, built and delivered a vast range of planters, benches and seating for a wide variety of projects in the public realm.

As our street furniture is a fusion between GRP (glass reinforced plastic), metal and timber we can offer a large selection of colours, finishes and sizes, whilst also offering bespoke pieces. All of which are robust and durable.

We collaborate with garden designers, landscapers, architects and specifiers to create a variety of schemes. This brochure shows you an innovative selection of products to inspire when specifying for your next project.

For more information or a free design consultation, please contact our dedicated design/estimating team who will be more than happy to discuss products to suit your needs.

Benches

Although we have many standard benches as starting points, you can mix and match the timbers, legs and sizes. The only limitation is your imagination.

Choice of timbers.

We use a variety of hardwoods depending on specification, such as sapele, cumaru, iroku and balau. These can be oiled or simply left natural. The thickness/ chunkiness of the timber can also be modified to suit your requirements.

Choice of legs

I-beam, tapered stainless steel, boxed galvanised metal, all of which can be left raw or powder coated in any RAL colour.

Our standard seat height of 450mm is designed for general comfort, however this can be altered, along with lengths and widths, to suit your requirements.

BENCH6

A photograph of a rooftop terrace. In the foreground, there are several modern, dark-colored planter benches with light-colored wooden slat seats. The planters are filled with tall, feathery grasses. The terrace is bordered by a low wall made of rough-hewn stone blocks. In the background, a large brick building with a prominent steeple is visible under a clear blue sky. The scene is lit with warm, golden light, suggesting late afternoon or early morning. A red diagonal line is visible in the lower right quadrant of the image.

Planter Benches

The combination of planter and bench offers a more pleasant environment to relax.

Some of the larger sizes are perfect for trees and shrubs and are used in communal areas as street furniture

Fork-lift truck access in the base

All of the floating benches have a cantilever seat arrangement on stainless steel brackets.

Large GRP troughs can be bolted together to create a planting bed with floating seating.

A choice of timbers can go on one, two, three or all four sides of the planter.

BENCH9 (page 8) has a floating seat with sloping back for those who prefer a more ergonomic seating environment.

BENCH8 is made from GRP with a cantilevered hardwood timber seat. The seat height is 450mm as standard but this can easily be altered.

The Curved Planter Bench will create a 4 metre circle when multiples are placed together. Available in any RAL colour and with a choice of timbers.

The chunky timber seating on BENCH11 show timber can be added to the curved trough which can be fitted to the full or half length of the curved planter. This gives a place for planting as well as a place to sit! As a single unit the curved bench is perfect for small gardens yet as a group it works equally well in a large communal area.

BENCH8

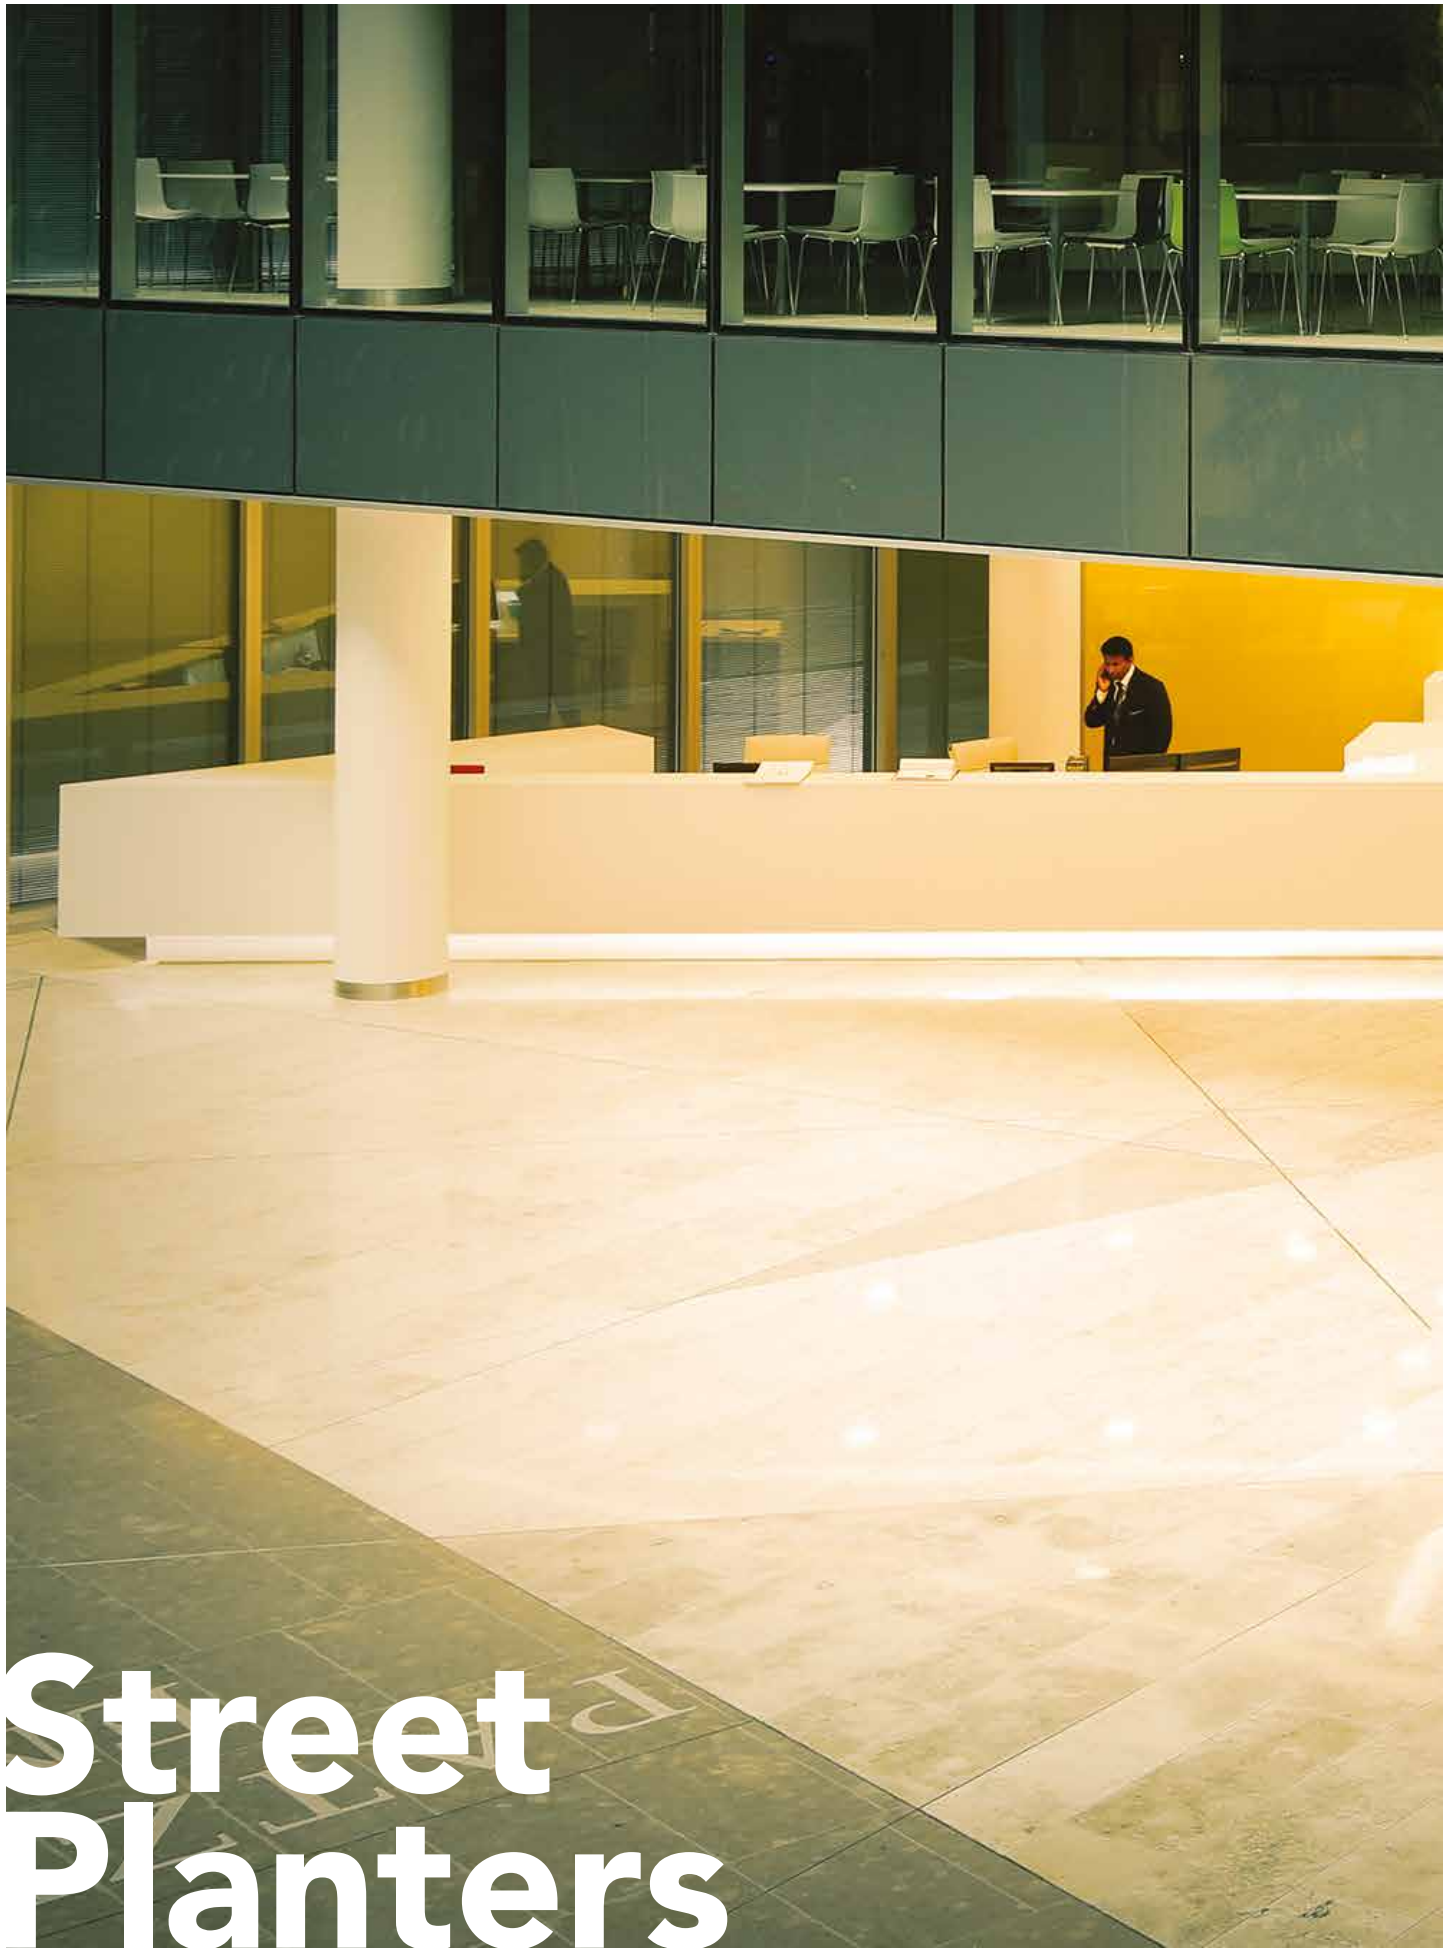

BENCH11

On stainless steel legs BENCH12 can be used as a stand alone bench or made to fit the internal or external radius of the curved trough planter.

There are a few variations of our Curved Planter Benches, each come in a standard length, however bespoke lengths can be made

BENCH12 with Planter

Street Planters

Our Street planters are made from strong durable GRP built with reinforced walls to ensure robust security. They can be used as a traffic deterrent and strong barriers for pedestrian areas, as many, when planted up will weigh over 2 tonnes.

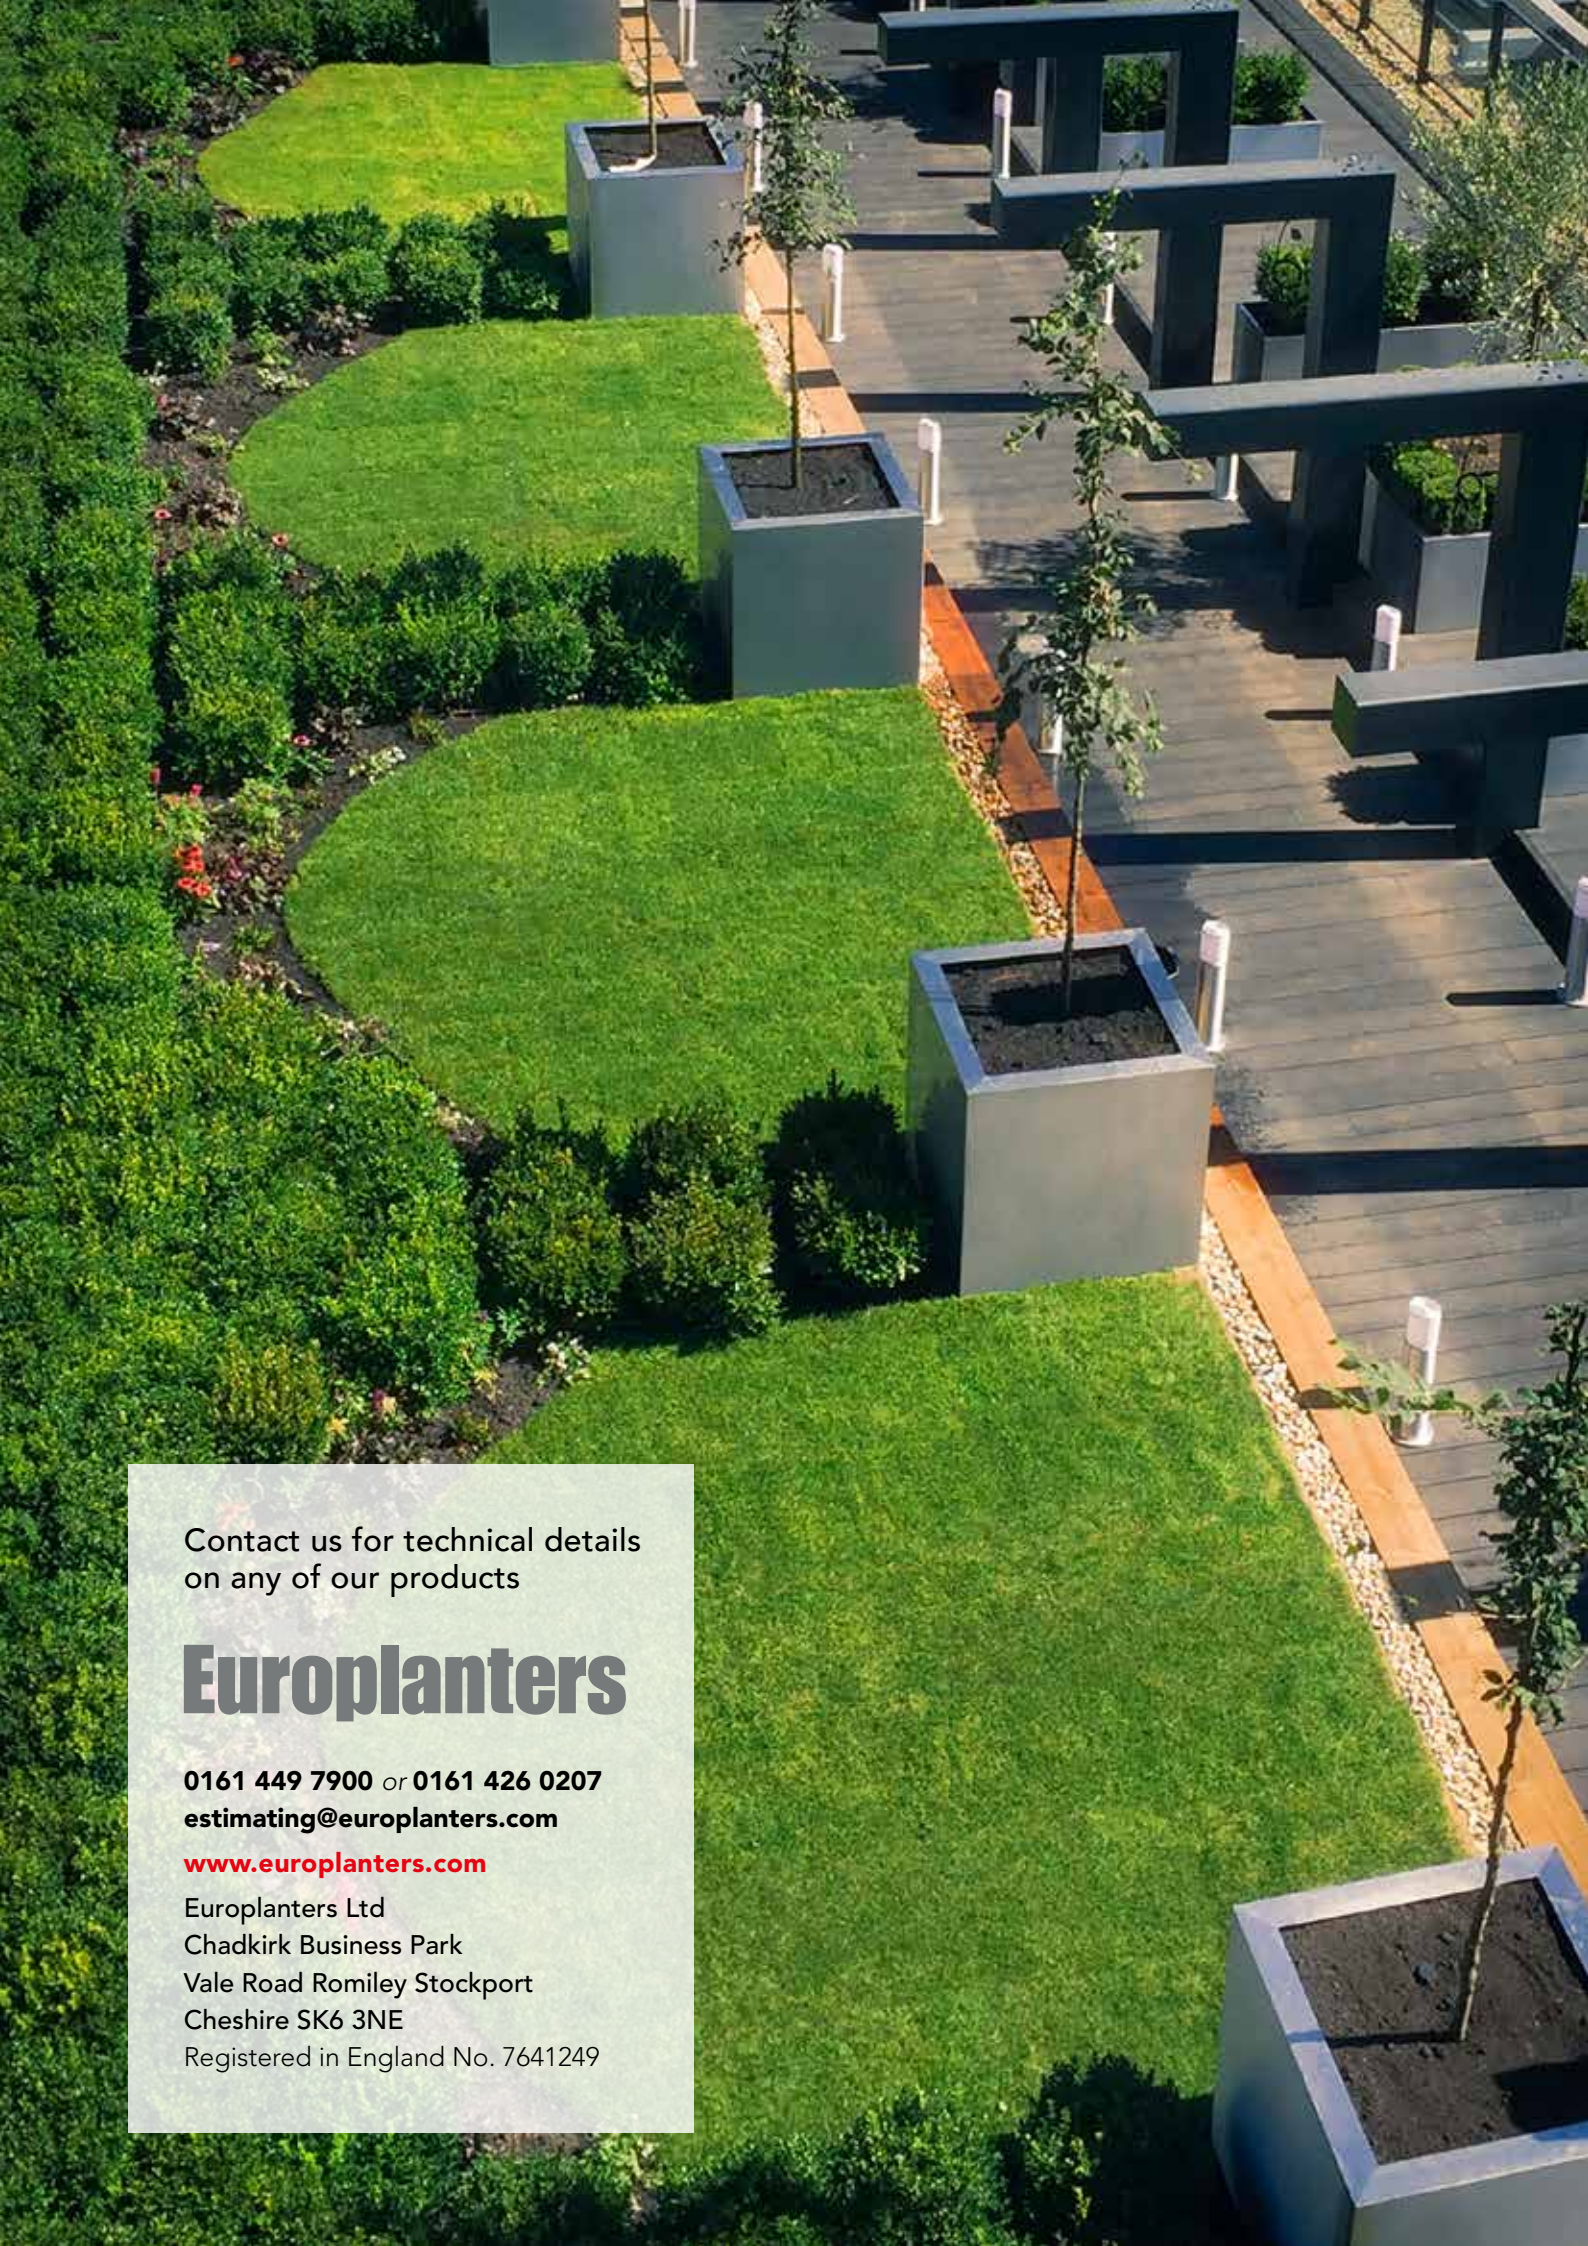

Often temporary barriers are required so instant hedges or tree displays can be placed in-situ for an event by using our planters (which are built with forklift truck access in the base).

Planters and screening are often used to create recreational areas for restaurants, cafés and pubs attracting people who enjoy sitting outside while also adding curb appeal. Lighting and signage can also be included to illuminate a pathway or signpost a location.

Many of our planters can be attached together to make large planting beds and can have seating incorporated (see Planter Bench pages) creating communal areas.
