

GRP Planter Panel System

Images below describe Europlanters GRP Planter Panel System, including how they are fixed together to form a planter. Planter panels are supplied pre-drilled with holes, ready for fixing using M8 stainless steel bolts (supplied).

Adjoining faces to have silicone sealant applied, to make watertight.

Typical GRP planter panels

Exploded bolt detail

Planter module with sili-cone applied ready for bolting of next module

Planter pre-assembled at the factory, as drill holes are made to ensure accuracy

Once panels are fixed together on site, planting up may begin. We may recommend some additional GRP strips bolted between opposite faces to keep overall shape.
